

# VARUN PEELA

Product Designer | SaaS, Mobile Apps & AI-Assisted Prototyping

Visakhapatnam, India · +91 70135 34396 · varunpeela01@gmail.com

Product designer with 2+ years of experience designing SaaS platforms, mobile apps, and data-dense dashboards across research, information architecture, high-fidelity UI, and developer handoff. I use tools like Cursor and Claude to create faster prototypes and clearer engineering handoffs. I've shipped products end-to-end as an in-house designer, freelancer, and founder.

## EXPERIENCE

### Freelance Product Designer & AI-Assisted Developer · Independent Dec 2025 – Present

- Designed Refill Health, a mental health SaaS platform, replacing linear onboarding with looping care pathways — intake, assessment, therapy, and check-ins — built for ongoing engagement rather than a one-time funnel.
- Redesigned HireDesk, an operations management SaaS, from a legacy table-heavy layout into a dashboard with contextual action panels and progressive disclosure; operators reported completing core workflows in roughly half as many steps.
- Designed marketing landing pages grounded in usability testing; client reported improved demo sign-up quality and stronger landing-page performance after launch.
- Built a Figma-to-Flutter handoff system — design tokens, component libraries, and interaction specs — to reduce ambiguity between design and engineering.
- Used Cursor and Claude to turn design files into implementation-ready frontend prototypes and component drafts, helping reduce the gap between design sign-off and development.

### Product Designer & Project Manager · SaralTech Jun 2024 – Nov 2025

- Owned product design across 3 concurrent SaaS products — research, wireframing, prototyping, and high-fidelity UI through to release, consistently on schedule.
- Migrated the team's design system from Adobe XD to Figma and built a shared component library with standardized tokens, reducing iteration time and inconsistency across products.
- Worked directly with engineers and stakeholders through sprint planning and design reviews, tightening handoff and cutting down on rework.
- Used Claude and Gemini to accelerate competitive research and heuristic reviews, shortening early research and review cycles during product discovery.

### UI/UX Design Intern · SaralTech Jan 2024 – May 2024

- Built high-fidelity interactive prototypes for 2 mobile applications, moving stakeholder approval from multi-round revisions toward near first-pass sign-off.
- Ran user research and competitive benchmarking that shaped early information architecture and user flows for startup SaaS products.

## SELECTED PROJECTS

**BYODH — Construction Tech Platform** — Founder & Lead Designer 2025 – Present  
Zero-to-one mobile product for construction crews: digital payments, GPS-based crew management, and job-site coordination, in a market with little polished SaaS tooling. Leading design end-to-end, using Cursor for AI-assisted prototyping to move faster from concept to build.

**Refill Health — Mental Health SaaS** — Lead Product Designer 2025

Designed the full product UX around looping care pathways instead of a one-time onboarding funnel, supporting long-term patient engagement.

**HireDesk — Fleet Operations Dashboard** — Lead Product Designer

2025

Rebuilt a cluttered, table-heavy B2B tool into a dashboard with contextual sidebars and live status indicators for high-frequency asset data.

**Desk Pet — Hardware / Software Product** — Product Designer & Maker

2024

Designed the full hardware-software UX for a smart desktop display device. Manufactured units on Bambu Lab 3D printers and sold direct-to-consumer — concept to shipped product.
